

DDWC 2653 VB.NET PROGRAMMING
ASSIGNMENT#1 – Chap 1 - Chap 6
(Variables and Calculation, Selection, Menu, Multiform)
SEM I 2021/2022
DUE DATE: 8th OCTOBER 2021

Based on Lab Skill#4, Question #2:

Calculate the price for fish to be paid by the customer based on the type and weight of fish taken.

Type	Price(RM)/KG
Mackerel	18.00
Pomfret	30.00
Sea bass	20.00

Customers can choose whether the fish are cut and cleaned or not. If the fish needs to be cut and cleaned, an additional charge of RM1 per kilogram of fish will be levied.

Use the check box for the user to select the type of fish and the text box for the user to enter the weight of the fish purchased. Your program should also display the image for different type of fish. Consumers should also be given the choice of whether the fish should be cut and cleaned. Consumers can buy all types of fish simultaneously with different quantities for each type of fish.

For this program, add suitable menu for user to clear the sales, display the daily sales information, change the display font style and/color.

1. FILE
 - i. NEXT CUSTOMER
 - ii. EXIT – with confirmation
2. EDIT
 - i. FONT
 - ii. COLOR
3. PROCESS
 - i. CALCULATE PRICE
 - ii. VIEW SUMMARY
